Why consider switching to Solar?

- Increase Property Value**
In the US, homes with solar-energy systems sell for 4.1% more on average.
- Reduce Or Eliminate Energy Bills**
Lock in your rates to protect yourself from future inflation.
- Gain Access To Rebates & Incentives**
Earn tax credits and/or rebates from federal and/or state incentives.
- Own Your Electricity**
A solar system allows you to make payments towards something that you own.
- Protect The Environment**
Solar energy is a clean renewable energy that eliminates carbon emissions.

Solar Installation Process

Choosing a solar installer is the critical first step. While the actual system install may take as little as 8 hours, the overall process may take up to 6 months.

The good news is you've already completed the first 3 critical steps: choosing your installer, site assessment and system design which means you're well on your way.

Permitting 2-7 Weeks	Applying for building and solar permits is the longest part of the process since the number of permits and the time it takes to obtain them varies from jurisdiction to jurisdiction. We will handle all the paperwork but it can be a lengthy process.
Ordering & Scheduling 1-4 Weeks	Depending on the availability of the equipment, this can take a bit of time. The solar industry is experiencing ongoing supply chain issues so again, this step requires patience.
Installation 6hrs / 3 days	The more complex your system is, the more time it will take to complete but this is the shortest part of the process.
Inspection 1-2 Weeks	This is a safety measure to ensure the system was installed correctly before it can be turned on.
Interconnection 2-6 Weeks	The utility company must sign off before the system can be switched on. This may also include the installation of a new power meter.
Total Process 2-5 Months
